

MS - SIGNAL FLOW

- Notes:-
1. Output gain of Side L, Side R and Bus 1 send should be reduced by 6.0dB to avoid clipping of Master Bus due to track summing.
 2. If using a plug-in to Invert phase on certain tracks, ensure the same plug-in is inserted on all relevant tracks to avoid latency induced phase problems
 3. It may be necessary to reduce the Output gain of the Orig Ref track to ensure that you are 'A/B' comparing at a matched level
